All safety & first-aid information is printed on each sachet.

How to Use

SANI-99™ is designed to take the stress out of disinfection. Just mix one sachet with a litre of tap water — no complicated steps, no special equipment. In under a minute, you'll have a ready-to-use solution that lasts for up to six months. Whether you're filling a spray bottle or pouring it into an appliance, it's quick to prepare and even easier to use.

1 Cut or tear the sachet and add 1L of water.

2 Shake bottle for a minimum of 60 seconds.

3 Spray directly onto the contaminated surface.

4 Leave for the correct contact time to disinfect.

- **For bacteria:** Leave on the surface for at least 1 minute (works as quickly as 10–60 seconds, but 1 minute is safest).
- **For viruses (like flu, cold, and coronaviruses):** Leave on the surface for at least 1 minute (effective from 30 seconds, but safer up to 5 minutes).
- **For fungi (like mould):** Leave for 15 minutes.
- After the contact time, you can wipe or let the

Use biocides safely. Always follow the instructions on the sachet label. SANI-99™ is suitable for most non-porous surfaces and some porous materials. However, it is **not recommended for use on fabrics**, as it may cause bleaching. The solution is **safe for skin contact** when used as directed, and no PPE is required during normal household use. Store sachets in a cool, dry place. Keep out of reach of children and pets. This leaflet offers general guidance only. For full safety and handling details, please refer to the SANI-99™ Material Safety Data Sheet (MSDS).
